Eros Carrasco

XR & Computer Vision Engineer

eros.carrasco@nyu.edu | linkedin.com/in/eros-carrasco | eros-carrasco.github.io | github.com/Eros-Carrasco

Engineer building the systems and pipelines that let people create art and express emotion in XR. Now researching Gaussian splats for XR production at the Brooklyn Navy Yard, and AR glasses with Ken Perlin at NYU's Future Reality Lab. Available full-time from January 2027.

EDUCATION

New York University, Tandon School of Engineering Expected May 2027
M.S. Integrated Design & Media | GPA: 4.0/4.0

- Relevant Coursework: XR Studio (Ken Perlin), Designing for Immersive Media (Tommy Martinez)
- 1st Place, NYU Data Science Bootcamp

Universidad AME XP
B.S. Game Development | GPA: 3.7

EXPERIENCE

NYU Tandon at The Yard, Brooklyn Navy Yard May 2026 - Present
Researcher

- Build the computer vision and scene analysis in Python that let a local agent read and edit Gaussian splat captures that cannot leave the building.
- Wrote a custom CUDA rasterizer for Gaussian splats, for the work a game engine cannot handle.
- Port the renderer to C++ as an Unreal Engine plugin for a multiplayer VR motion capture production.
- Built real-time relighting for splat captures, with no retraining and no stored normals.
- Brought large photogrammetry scans within headset performance budgets.

NYU Future Reality Lab, with Ken Perlin May 2026 - Present
Researcher

- Research how AR glasses integrate into desktop workflows, collaboration and work with 3D data.
- Built the registration that anchors the user's monitor in virtual space, locating the screen from on-screen markers.
- Contribute to the lab's XR framework, which moves content between the desktop screen and 3D space.
- Built internal review tooling the lab used across more than a dozen revision cycles of its NSF proposal.

NYU VIP, Metaverse for Education January 2026 - May 2026
XR Engineer (Apple Vision Pro team)

- Integrated a multi-user Unity XR environment into Apple Vision Pro with the visionOS toolchain, with cross-device support for Quest and desktop.

Transfr October 2023 - July 2025
XR Designer

- Built and shipped 5 production VR simulations in Unity, deployed in classrooms across educational institutions.
- Defined and documented the Spanish localization workflow for 30+ learning experiences, which the team adopted as its standard.
- Designed accessibility in from the start: wheelchair height adjustment, color-blind-safe UI and closed captions.

Inmersys March 2023 - October 2023
Unity Developer. Contributed to production VR applications, including a project with UNICEF.

TECHNICAL SKILLS

Languages: C++, Python, C#, CUDA, HLSL, JavaScript

Graphics and XR: Unreal Engine, Unity, WebXR, visionOS, Meta Quest, 3D Gaussian Splatting, real-time rendering

Computer Vision and Capture: OpenCV, marker-based registration, OCR, local vision models, motion capture (OptiTrack), volumetric video, Git, Arduino
